

TNUDA website – Available now in English!

TNUDA, the Israeli Information Center for Non-Ionizing Radiation and its effects on public health was established in 2013, in accordance with a governmental resolution. The Center is guided by the precautionary principle and therefore promotes educated use of technologies involving non ionizing radiation, while maintaining a balance between the rapid technological advances and protection of public health.

Our professional & multidisciplinary team collects and compiles information on non-ionizing radiation, summarizes & analyzes it, and makes this information available in a clear and accessible way.

Since September 2014 the TNUDA website serves as the main information channel for various target audiences in Israel (the general public, governmental offices, scientists & industry). In light of the growing interest abroad and our wish to enable wider access to the information distributed by the center, we are now proud to present the English version of TNUDA website.

To date, more than 200 articles have been published, covering a large spectrum of topics such as health, physics, legislation & policy. In addition, other items such as FAQ, selected publications & glossary are available to the readers. Attempts are made to present the information in a comprehensive way, and to include the different aspects of the issues discussed. As a case study in determining health policy in Israel the different aspects of Wi-Fi use in schools are described in several articles.

We hope you will find the information on our website interesting, stimulating & useful
